

Talk to someone who has a running start on your packaging operation.

The more automated your packaging systems become, the more you stand to gain in terms of productivity and your bottom line.

But the route to a greater reliance on automation isn't always easy. That's why it pays to talk first with a company well-versed in the way products flow—and with the equipment that makes it happen.

The company?
Paragon Machinery Corporation.

Not just machines, but know-how.

If an off-the-shelf machine is what your operation needs to improve performance, Paragon can spec it, install it and make sure it runs worry-free for you shift after shift.

However, where you'll see us really stand out is not just in installation. It's in integration.

Which means, simply, making sure your new machine is fully set up for the way you (and only you) do things in your plant. And if that calls for modifying a standard machine to work better with all the other machines in your system, we have the expertise to do it.

Technology, the key to better performance.

You're not just dealing with hardware experts at Paragon. Since many of today's packaging machines rely on sophisticated software packages, we also provide customized programs that enable you to get maximum potential for your investment.

And be assured that Paragon keeps abreast of the constant technological advances in the industry, so you'll always have available the latest developments in everything from product feeding to robotics to verification systems.

Always looking at the bottom line.

We know that you make decisions about your packaging lines on a cost vs. benefit basis. That's as it should be.

So if we can show you how to increase productivity, shouldn't you consider talking to Paragon Machinery Corporation?

Just give us a call with no obligation.

Perhaps you have a glitch in your labeling system. Or maybe you think your cartoning system could perform better. Or it could even be you're wondering if the latest robotics technology could pay off for you.

Don't hesitate to phone Paragon at 763/497-9990 and let's discuss the possibilities. You won't find anyone more up to speed on your packaging operation.

When it comes to packaging, the automatic choice is Paragon. *The specialist in machinery solutions.*

Product feeding and filling.

Accurate automated loading of virtually any type of product

into secondary containers or devices, including bottom friction feeders, vacuum placers, paper inserters, smart belts, bowl feeders and liquid and dry product fillers.

Material handling.

For greater consistency in delivering products within your plant, ask about the latest in roller, flat belt, tabletop, flighted and vacuum conveyors.

latest in roller, flat belt, tabletop, flighted and vacuum conveyors.

Marking and identification.

For a range of reproduction methods and

resolution capabilities utilizing contact, ink jet, thermal transfer and laser printing on your products.

Labeling.

The state-of-the-art in wipe-on, blow-on and tamp-on labelers

for product identification and promotion. Print-and-apply labelers also available.

Verification and inspection.

Whether it's to make a weight, visual, bar code or metal

detection inspection, the system to do it surely comes from Paragon.

Robotics.

For multi-axis movement of repetitive tasks, including everything

from general assembly to complex welding. Capabilities unsurpassed anywhere.

Flexible packaging.

Paragon is the proven source for machine designs that accommodate

almost any product needing wrapping, bagging or pouching technologies.

Cartoning.

The dependable machines for vertical or horizontal loading and carton forming.

Includes semi- or fully automatic operation as well as continuous or intermittent motion.

Collating.

No matter how complex the arrangements become, you

get fast, accurate assembling of products and packets with automation from Paragon.

Case packing.

The ultimate in ensuring protection for side, top, bottom, wrap-around

and tray loading. Casepackers are either semi- or fully automatic operation.

Palletizing.

For automatic collating of cases for storing or transportation,

Paragon is the source for the latest that modern technology has to offer.

Special and integrated systems.

If you don't think it can be done, you haven't talked

to Paragon. A custom system for virtually any specialized task or function can be designed.
