

Pick a printer. Any printer.

How could TagIt, already a high-performance printing solution, be even more valuable? What if it were more flexible, or had more import options? And what if it could work with any Windows-compatible printer?

Done, done, and done. Introducing BCC Software's TagIt Pro™, the proven container-tag printing resource that's now flexible enough for any mailing system. TagIt Pro prints unlimited quantities of pallet labels and barcoded tray and sack tags for virtually all mail classes. Enter the appropriate ZIP Code data for on-demand productivity. Batch printing is a snap, too: just import data from label image, comma delimited, or Mail.dat files.

New Windows-printer compatibility (naturally, it's still optimized for BCC's TrayMate printers) means there's no need to buy additional hardware. Just install TagIt Pro and get back to work — with improved efficiency and productivity.

More power. More convenience. More value. Choose TagIt Pro. Only from BCC Software.

Pricing

TagIt Pro: \$395

(Includes full year of toll-free customer support and software upgrades)

Annual renewal: \$195
